## PRESS RELEASE

### **HD rotors for EL 122 and 162 power tillers. Carbide blades for EL 282 power tiller rotors.**

The EL 122 and 162 ranges of power tillers can now be delivered with the **new HD rotors** for use under very intensive or difficult conditions linked to either very deep work or very stony conditions.

The main modification is an increase in the rotor tube diameter to 133 mm, but also an increase in the thickness of the rotor tube itself.

For stronger blades, the attachment is reinforced by counter-flanges which optimise bolt mounting.

EL 282 power tillers, designed for use with tractors up to 270 hp can now be delivered with **reinforced DURAKUHN® blades**. This anti-wear treatment consists in the application of a coating of tungsten carbide. For users, these blades are much longer-lasting, with less time wasted in replacing blades as well as higher quality work.

April 2010
