

PRESS RELEASE

Rear mounted mower conditioner FC 3515 R

The FC 3515 R new mounted mower conditioner completes KUHN's offering for cereal farms and contractors.

KUHN completes its range of mower-conditioners featuring a roller conditioner with its new rear mounted **vertical folding** model, the FC 3515 R, of 3.50 m working width.

Just like the FC 3115 R model of the same range, the mower unit folds up to 126° to obtain maximum compactness for transport and optimum balance of weight on the tractor rear wheels.

The FC 3515 R mower-conditioner is equipped with a SQUAREFLEX roller conditioner. The large diameter rollers (24 cm) with an exclusive profile have, as standard, a double drive synchronized for life. Some parts made of materials such as aluminium make it possible to limit the total weight of the machine to that of a finger conditioner machine. This design ensures effective conditioning of all fodder (alfalfa, ryegrass, meslin, etc.), with a high output while minimizing maintenance time.

The machine is of course equipped with the OPTIDISC ELITE cutter bar, renowned for its sturdiness and cutting quality in all conditions. Comfortable to use, this cutter bar requires no maintenance and benefits as standard from the FAST-FIT quick fastening knife system.

The LIFT-CONTROL suspension offers powerful and constant relief for improved protection of the plant cover. Coupled with the breakaway system, it thus participates in the effective protection of the machine against obstacles. The pivot point strongly offset to the left also contributes to effective protection of the working parts, in particular at the level of the first discs. The return to the working position is carried out non-stop.

For farms located in very hilly areas or with medium-sized tractors, an adaptable counterweight mass on the left side of the chassis is available as optional equipment. It reduces the imbalance at the level of the coupling to the tractor.

Combined with a front mower, this machine allows achieving a higher work output.

This mower-conditioner completes the FC 1015 range, which already includes the FC 3115 D, FC 3515 D (finger conditioner) and FC 3115 R (roller conditioner) models.
