

PRESS RELEASE

Higher precision while making life simpler

Changing application rates has never been simpler than with KUHN EasyMaps! The KUHN EasyMaps app provides economical, agronomical and environmental benefits. It has new in-cab functionalities and improves working precision and comfort.

This new smartphone and tablet app displays application maps in real time. Depending on where you happen to be on the plot, it indicates the required application rate and variation percentage. It is not necessary to have a dedicated GPS system in the tractor cab. The driver just has to change the settings on the machine terminal.

KUHN EasyMaps is compatible with all types of application maps: SHAPE and ISO-XML provided by the main suppliers and map-creation software for fertilisation, spraying and row or precision seeding.

KUHN EasyMaps also displays the areas already worked on the plot so night-time operations are easier. With this app farmers can remove disparities and take control of variations within the plot to increase productivity.

The app is free and available at Google Play and Apple Store.

The following video shows the functionalities of the KUHN EasyMaps app:
