

## PRESS RELEASE

### KUHN FC 13460 RA awarded FARM MACHINE 2024 In the forage harvesting category

---

The KUHN FC 13460 RA mower-conditioner has been awarded the FARM MACHINE of 2024 award. The expert judging panel declared the FC 13460 RA the winner in the forage harvesting category. The award was presented at AGRITECHNICA 2023 in Hanover.

The FC 13460 RA mower-conditioner offers a significantly higher work output than conventional mowing combinations with a variable working width of 12.40 to 13.40 m. Mowing a large area with a single machine allows substantial savings on pulling power, fuel and labour costs. In a single pass, its belt grouper forms a swath of approximately 1.80 m to 3 m wide with the forage collected over a cutting width of more than 13 m. The farmer can then exploit the full potential of the forage harvester. The conveyors can also be raised for a wide delivery. The mower makes Controlled Traffic Farming (CTF) – i.e. cultivation with permanent lanes – possible. With this machine, KUHN offers a concentrate of technologies at the service of harvesting work performance, with forage quality remaining the main objective for every farm.

#### **Joseph TARD – Product Manager mowers and mowers-conditioners - KUHN-Saverne**

*“An award is always an achievement for the entire team involved for many years in such an important project. It all began with user requests to fulfill, and our mission is to best meet their needs.*

*Our customers continuously face new challenges, and the FC 13460 RA mower addresses them not only due to its large working width of 13.4m, its belt merger for grouping forage or its increased hourly output but also by providing easy settings, more versatility; more connectivity, more advanced features, new technologies... All these assets grouped into one unique product!*

*Working together as a team allowed us to go further and we are proud to see our machines mowing in the various regions of the world.”*

#### **Florian TRABANDT – Product Manager - KUHN Deutschland**

*“We would like to thank the jury for awarding the Farm Machine award in the Hay & Forage category for KUHN’s new FC 13460 RA. Thanks also to all my colleagues who worked intensively on this machine for quite some time. As an innovative leader in the field of forage harvesting, we are committed to meeting the needs of farmers, today and in the future.”*
