

PRESS RELEASE

KUHN connects its CCI 800 and CCI 1200 terminals!

To easier assistance and diagnosis, updating and remote data transfer, KUHN connects its CCI 800 and CCI 1200 terminals using the KUHN CCI Connect solution.

CCI Remote View:

The CCI Remote View feature allows you to view all machine and terminal functions on your computer, tablet or smartphone from the MyKUHN customer space. It is ideal for assisting or training a driver in the use of a machine. The CCI Remote View functionality has also been opened to all KUHN partners/dealers. Thus, at the request of the farmer, they view the terminal screen and can assist the driver remotely.

Automatic update:

By connecting the CCI 800 or 1200 terminal to the Internet, an update notification is displayed when a new software version is available. The terminal always features the latest developments.

KUHN EasyTransfer and Agrirouter:

With KUHN EasyTransfer, KUHN offers a solution for remotely transferring prescription maps directly to the in-cab terminal. Whatever the map format (SHAPE or ISOXML), the transfer is done in one click.

Thanks to agrirouter, the terminal receives data from KUHN EasyTransfer but also from any other software or DST connected to agrirouter. The agrirouter initiative groups more than 80 companies. Today, more than 35 solutions are already connected to it. When the work is completed, the terminal transfers the data directly to the DST or the operations management software. The demand for transferring tasks from the machine is in high demand. Some countries require farmers to justify the work carried out over 5 years.

KUHN CCI Connect can be retrofitted on all CCI 800 and 1200 terminals already in service and is also available when purchasing a machine from our dealers or partners.
