

PRESS RELEASE

METRIS 2 trailed sprayer

The METRIS 2 sprayer range now features even more equipment!

The METRIS 2 trailed sprayer represents the heart of the KUHN trailed range, perfectly suited to grain farms. It can work with a 3,200 or 4,100-litre tank and has an 18 to 38-m boom, which now comprises new features.

A top-of-the-range sprayer. With a hitch-to-axle length of 4.40 m, a width of 2.55 m, and height of 3.40 m (with 36 m boom), the METRIS 2 sprayer is extremely compact and stable for transport. As a result, road travel and entering fields is completely safe. The METRIS 2 has four levels of suspension (drawbar, axle, parallelogram, and EQUILIBRA suspension frame) which provide excellent machine stability and keep the boom as close as possible to the target for precise work. The METRIS 2 sprayer can be fitted with cutting-edge precision spraying technologies such as AUTOSPRAY circulation, the new versions of the BOOM ASSIST ground following system, and TRACK ASSIST, which ensures that the sprayer wheels follow the tractor wheels perfectly.

A wider choice of 2-arm booms! The TR4 boom is now available from 24 to 30 m and gives access to additional technologies such as MULTISPRAY DUO circulation. The TR4 joins the RHPA boom (available from 18 to 24 m) in the METRIS 2 trailed sprayer range. These aluminium booms are a lightweight and durable solution.

A multi-material boom. A new addition joins the RHA3 aluminium boom on the METRIS 2 range of 3-arm booms with compact folding system. It is a hybrid boom named LEH3, and comprises a first arm made of steel, to ensure that the assembly is perfectly rigid, and the following arms are in aluminium. With KUHN's tried-and-tested painting process, the steel gains excellent corrosion-resistant qualities. The combination of these materials gives optimum value for money in sprayers with widths of 27 to 36m.

METRIS 2 with a LEH3 boom

All booms available for the METRIS 2 sprayer are designed for more intensive working conditions.

New tyre technology. The trailed-sprayer range boasts VF tyres. Designed to carry a heavier load, the "Very High Flexion" tyres work at low pressure, limiting soil compaction, preserving soil structure, and maintaining good yield potential!

Connected sprayers. The ISOBUS CCI terminals are now equipped with the KUHN CCI Connect Lite version, which includes the Wi-Fi module, Remote View and Online CCI Update for access to different remote services.

These new features upgrade KUHN's offer of METRIS 2 trailed sprayers to meet market demands as well as providing a solution to agronomical challenges such as soil compaction.
