

## PRESS RELEASE

### Section Control automates your mowers and rakes during forage harvesting

---

GPS section control is now available on the FC 9330 RA mower conditioner and the GA 13231 and GA 15231 four-rotor rakes.

---

#### Increased peace of mind with section control

To improve comfort at work, like other field crop machines, mowing and windrowing equipment benefits from GPS automation solutions.

Benefit from this feature to automate individual raising and lowering of mower units (FC 9330 RA) or rotors (GA 13231 / 15231) at the headland or during manoeuvres. In the most restrictive or wedge-shaped fields, the driver only concentrates on driving, a real comfort during intensive work! You benefit from a real gain in productivity.

Manual control of the machine remains possible via the control terminal or the Isobus CCI A3 joystick.

FC 9330 RA and GA 13231/15231 are compatible with Isobus CCI 800 and 1200 terminals for Section Control by GPS but also with other ISOBUS terminals.
