

## PRESS RELEASE

### The ideal roadside mower for local authorities

-----  
The SPRING LONGER S 1670 RTR verge mower completes the KUHN range of roadside mowers with versatility and safety.  
-----

The SPRING LONGER S 1670 RTR verge mower is designed for local authorities. It can manage mowing operations coupled to tractors from 70 hp.

It can be hitched at the front or the rear of the tractor to use in combination with a hedge and grass cutter. Total preparation time for the combination is less than 30 minutes.

It is ideal for maintenance operations on roadsides, ditches, banks, and hedges due to the impressive pivoting capacity of the mowing unit (-55° to +90°).

A NON-STOP safety system with automatic return to working position protects the machine against impacts.

The rotor with articulated scoop flails produces fine mowing to ensure rapid decomposition of residues.
